

Interesting Article, Dealing on 'The World of Wheat'

Director "Crop Testing Plan"
By H. G. L. Strange.

The wealth, welfare and prosperity of farmers, and indeed of all of us, in Western Canada depends mainly on the sale each year to foreign countries of large quantities of Canadian wheat at satisfactory prices.

Between 200 and 300 bushels a year, it seems to me, will have to be exported if a reasonable standard of living for our producers and other people is to be secured.

Our large annual sales in the past have depended on the buyers in no less than 72 different countries demanding or wanting Canadian wheat. Our problem, then, can be stated very simply. It is that somehow we must get the buyers of 72 countries to want between 200 and 300 million bushels of Canadian wheat each year, and to pay a reasonable price for it. Can this be done? Yes, if at least I believe it can, provided for one thing that we maintain, and if possible increase, the present margin of quality or "strength" that Canadian wheat enjoys over the "strength" of all other wheats in the world. But we must remember that meanwhile other countries are steadily improving the quality of their own native wheats. Canada therefore, we will undoubtedly have to increase the efforts she is now making in order even to maintain her present superiority in wheat quality.

The recent substantial increase in the price of wheat has been brought about by the complete disappearance of the "burdensome" world surplus that has tended so to depress world price since 1930.

Rainfall that may occur in Australia and Argentina for the next few weeks is the most important factor now governing world prices. If abundant rains soon occur the world price of wheat will probably fall. If generous rains do not soon fall, however, the price will probably be still further. The Buenos Aires "Futures" market for the moment is an excellent price barometer.

Mrs. Jones' Funeral At Maple Creek

Many Old Friends Sent Flowers

The funeral of Mrs. Jones who died in the hospital on Oct. 11th while on a visit to her daughter, Mrs. Joe Podesta, here, took place in Maple Creek on Tuesday the 18th.

The funeral was attended by a number of old friends of the Maple Creek district who were received and resided for a number of years.

Besides the family and relatives the following sent flowers from Maple Creek: Mr. and Mrs. Cessley, Mr. and Mrs. Boyd, the Anquet family, Mr. and Mrs. Bunnett, Mr. and Mrs. J. Fleming, Commercial Hotel, W. Coles family.

Rev. Reddick; Mr. and Mrs. R. Davies, Mr. and Mrs. A. Oakland as Podesta and Family, Mr. and Mrs. McDermott, Mrs. McCleary, Mr. and Mrs. A. Rose, the Allenback family, Mr. and Mrs. E. L. Stone and Langley, Mr. and Mrs. Sheldon, Mr. and Mrs. J. P. Palmer, Mr. and Mrs. T. H. Smith, Mr. and Mrs. F. J. Badger, Mr. and Mrs. Gibson.

From Carmichael Bryant family, Mr. and Mrs. W. E. Ogden and family, Mr. and Mrs. G. Beaton, Mr. and Mrs. O. E. and the Helge family, Mr. and Mrs. H. Hagman and family, Winnipeg.

The late Mrs. Jones was a lady of the old school. Of her the Maple Creek News says: "The Jones' ranch on Hay Creek was for many years, one of the most prosperous in this corner of the province. The passing of Mrs. Jones will bring back pleasant memories, coupled with regret, that another gracious pioneer has gone forth never to return."

Two robbers held up a farmer at his home near Nobleford and stole \$800 in cash from him.

According to the census taken by the most recently, Alberta's population now is 772,017, an increase of 40,412 over the last census in 1913. This is considered a disappointment as it was estimated the population should have been at least 800,000. However, Alberta shows the fastest increase of the three prairie provinces.

A. Y. P. A. Social Was Much Enjoyed

The whist drive and dance held in the Parish Hall on Monday evening under the auspices of the A. Y. P. A. was a decided success.

There were ten tables of card players and the prizes were awarded as follows: Whist—First, Mrs. McDermott; Second, Mrs. H. Cooper; Consolation—Mrs. Barlow and Genta; Consolation—Mrs. K. Johnson; Bridge—First, Mrs. Jean Moore; Second, Mrs. H. Cooper; Consolation—Mrs. George Evans; Con. Mr. W. Lawson. After cards refreshments and dancing were enjoyed. Mr. A. Foster of Medicine Hat supplied the music for the dance.

Miss Betty Watkins of Medicine Hat and Mr. John Davies of the evenings on the program by their rendering of vocal solos.

\$2,000 Loan For The Housing Scheme

Housing Repair Program Has
Been Announced

Immediate initiation of the Dominion government and "lender banks" co-operative scheme to assist a \$50,000,000 housing repair and modernization program has just been announced. Arrangements have been completed whereby owners will be able to easily negotiate property rehabilitation loans up to a maximum of \$2000 at a total interest cost of 6.5 per cent over a one year period.

Several people have been asked when the local Little Theatre organization is going to commence preparing for the season.

Miss Lydia Gruchy, of Moose Jaw will be the first woman to be ordained into the ministry of the United Church. Ordination takes place Nov. 4th.

When Social Credit dividends are issued they can be used only for the purchase of Alberta state goods, according to latest reports.

A WRONG MOVE

There is no doubt that a very large percentage of the people of Alberta are in sympathy with the Aberhart government in its endeavor to reduce the burden on the bonded indebtedness of the province, but few are in accord with the attitude they have taken in trying to solve this problem.

Unfortunately in their attempt to get after what they refer to as the "Big Shot" the S. C. Government passed legislation which in many cases is going to be a hard blow to those whom, during the campaign, Social Credit had promised to help. These many cases are widows and orphans who because of the recent debt and interest reduction legislation, will be left high and dry and will be short of their accustomed food and clothing.

Saskatchewan at present is in a bad way financially but they have approached the situation in a business way and have secured arrangements which are satisfactory to all concerned.

Quebec too, is going ahead on the orthodox financial lines and has already made arrangements for the borrowing of \$12,000,000 maturing in 1938 at one per cent; \$12,000,000 maturing in 1940 at 1 1/2 per cent; \$12,000,000 maturing in 1942 at 2 1/2 per cent and \$15,000,000 maturing in 1951 at 3.08 per cent.

With these problems ahead of them the province in a manner which strengthens their credit and allows them to go ahead with improvements and developments, and keeps local money in their provinces.

The Misses Jean and Myrtle Eldredge and Pearl Moore are on a fortnight's vacation in Calgary.

At Nanton last week, Mr. Blackmore, S. C. leader in the Federal house, stated the Social Credit dividends might possibly be \$10.00 a month.

The Aberhart government is looking an outlet for scrip by suggesting to Cabinet ministers and civil servants they take a percentage of their salaries in property certificates.

How Alberta Farmers Could Save Millions

By Plans Now Arranged With
Sask. Farmers

While in the west recently Hon. J. G. Gardiner, federal minister of Agriculture, explained how arrangements were made for the reduction of \$75,000,000 in debts owing by farmers in Saskatchewan. Mr. Gardiner also stated he had no doubt that farmers would co-operate with Alberta if it would seek to bring about mutual debt reduction in the dry area of this province. It has been figured out that if the same plans were worked out here, Alberta farmers in the drought area could save in the neighborhood of \$13,000,000 which would be in debt owed by farmers to the Dominion for old grain loans, refinance loans and payments on Dominion loans.

\$18,000,000 Granted Alberta Drought Area

From Dominion Govt For Feed
And Free Freight

A federal grant of \$18,000,000 has been made to cover Dominion expenditures for feed and freight to give relief to the drought area in Alberta until March 31st next, it was announced by John Vallance, chairman of the committee named to administer the Prairie Farm Rehabilitation Act.

Mr. S. Schneider has his new house near the garage now about completed.

Miss Sanderson, daughter of Mr. and Mrs. A. Sanderson of this town, was among those who were successful in passing the registered nurse examinations written in Calgary recently.

The Dominion government has opened an office in Edmonton for the handling of relief for the drought area. Under the arrangements the federal cheque to the province, to cover the Dominion's share of relief costs for the drought area will be issued from this new office.

Suggest Park In Bad Lands Near Steveston

District is Now Known as The
Dinosaur Cemetery

There is now a movement on foot to establish a park in what is known as the bad lands of the Red Deer River north of Brooks and near Steveston. A topographical survey of this region has been completed by federal government engineers. The survey includes the "dinosaur cemetery" where petrified remains have been found in great numbers. The Brooks Bulletin says:

More and more people are becoming interested in the proposal to set aside the Bad Lands as a Dinosaur Park and the building of a museum there, in which excavated dinosaurs may be set up. This region might become one of the most interesting places in the west, attracting tourists from far and wide. As such it would be a "natural resource" of considerable value.

Young People Have Jolly Outing

About 30 members of the Young Peoples' Society of Gordon Memorial church motored out to the home of Mr. and Mrs. L. J. Lipp, 13 miles west of town, on Monday evening. A jolly social evening was spent. A program of choruses, duets and solos had been arranged by the young people and all in thorough enjoyment. Games were played, were played throughout the evening and bounteous refreshments were served during the evening. The gathering was declared to be a decided success by all present.

Geo. White, a fugitive from justice and who wound a Mounted Police, near Laird, Mounties when located by organized posse.

Mr. Pogmore, a farmer living near Tetter, was shot and killed by his former hired man, Ernest. Mrs. Pogmore has also under arrest as being an accomplice.

Quite a change in the weather took place last Monday. There was quite a dip in the temperature accompanied by a few flurries of snow. The weather was general through out the southern part of the province. The weather is still cloudy and threatening.

A number of members of the Single Unemployed Protection Association created quite a stir in the government soup kitchen in Edmonton last Tuesday. They were protesting against the alleged compulsory character of the farm placement scheme.

There appears to be a strong odorous indication that there are a few skunks directing their winter in several sections of the town. If their hideous breath as many cents as their accounts are noted around as they should be with going after.

Is This Motordom's Largest Family?

31 CHILDREN AND CHEVROLET
At Powness, Ontario, with a few miles of the famous Quinte peninsula, live Mr. and Mrs. David Turgeon and their remarkable family of 31 children—11 boys and 20 girls. All were born on the farm in Chatham Township, where Mr. Turgeon "remained" and where in 1929 he bought his young bride. Five sons and 10 daughters are now married and there are 40 grand-

children. Above, the Turgeon family. Below, Mr. and Mrs. Turgeon and the fifth car they have owned, a Chevrolet four sedan.

'A BETTER CHEW- I'LL TELL THE WORLD!'

BIG BEN

The Perfect Chewing Tobacco

Education And The Teacher

Few people look upon periods of depression such as Western Canada has experienced in the past few years, along with most of the other countries of the world in varying degree, with complacency. On the contrary here, as elsewhere, such experiences are usually regarded by the great majority of persons of unadulterated wit, with dissatisfaction and unrest their inevitable concomitants.

It is customary, under such conditions, to surround everything with a halo of gloom. Everything is wrong at home and abroad. Words and deeds are subjected to criticism in an intensive search for microscopic flaws and motives are probed with deep, underlying suspicion. Altruism and faith in fellow mankind almost appear to have gone into hibernation. The whole stream of life seems to be ruffled with turbidity. Criticism is the order of the day.

Criticism of the right type and with the proper motive behind it, has, of course, its place in the scheme of things. In fact, without it, there could be little if any progress, but if it is to fill its appointed role in life, it must have behind it a sincere desire to promote betterment and must be dictated by reason rather than swayed by blind passion.

The educational systems and educational methods in operation in the prairie provinces are among the many things which have had to run the gamut of the critical vogue of the period. The criticism which has, in recent years, been voiced freely at conventions, school board sessions, public meetings and during election campaigns in the home and on the street comes not only from parents of children attending educational institutions and the general public but also from educational authorities, teachers and others trained in the craft of pedagogy.

One hears, on the one hand, that the educational system is too expensive and too extravagant. On the other hand, governments and trustees are accused of parsimony. One day the people are told that, in effect, the educational system and set-up is lagging behind the times and the following day that it is too far advanced for the requirements of present day social conditions and requirements.

As to methods, curricula, equipment and text books, criticisms are legion and varied, so much so, in fact, that it would take a ponderous tome to even list them.

While it may be very difficult, and perhaps impossible to crystallize all these opinions and criticisms into some co-ordinate form which might enable them to be attacked and dealt with on a scientific basis, the existence of so much discussion on such an important topic demonstrates, at least, that the depression is having the beneficial effect of arousing a keener interest in a topic of vital interest to the future welfare of the country, because it cannot be denied that the trend of education of the youth of today will largely determine the destiny of the nation tomorrow.

Because of this it is highly important that there should be some indication of majority opinion on educational systems, methods and trends. There are one or two things which should not be lost sight of in this welter of discussion which often, unfortunately, ranges around comparatively trivial details. That is, the main purposes of educational systems, which might briefly be enunciated as the intention of developing a desirable type of citizen and of developing a citizen capable of fitting himself or herself into the life of the community.

This means the development of a race of people with character and ability to think and act for themselves. If this is borne in mind as the chief objective of education, the great importance of the character and ability of the teacher becomes immediately apparent, a matter of far greater importance than the method, the text book or the curriculum, of even greater importance than the type of building in which instruction is carried on or the equipment used in imparting instruction.

The statement is not made with any intention of conveying an impression that the schools of the west are not staffed with teachers of character and capacity. On the contrary, the standard of the teaching profession has improved very materially and rapidly for so young a country as the Canadian west and teachers of the present day generally represent a high standard.

But it should be pointed out that if more emphasis is laid on the character and ability of the teacher as an essential of the first importance, the controversies over many other phases of the educational system would assume their rightful comparative values and would be relegated to the rear as questions of more or less minor consequence.

The house economics page has a recipe whereby flautists can be kept quiet. That's a good idea; keeping it indefinitely.

Getting letters from friends is usual. You have to write them, too, or they quit.

Replicas Of Crown Jewels

Collection Represents Forty Years Hobby of One Man
There will shortly be on view in London a collection of about 2,000 full-scale replicas of Crown Jewels, regalia, insignia, and other emblems of royal ceremonial which have cost their owner nearly £30,000.

The collection covers most of the past and present monarchies of Europe, and represents the 40 years hobby of one man and endless patient work by jewellers, stone-cutters, polisher, and other highly skilled craftsmen. Naturally the 40 years hobby of one man and endless patient work by jewellers, stone-cutters, polisher, and other highly skilled craftsmen. Naturally the 40 years hobby of one man and endless patient work by jewellers, stone-cutters, polisher, and other highly skilled craftsmen.

Each is an absolute copy for size, shape, cutting and setting, color and polish, and so meticulous has been the effort to achieve historical accuracy that the owner of this collection has literally spent months in the Tower and the London Museum making sketches and in collecting photographs and measurements. In sixteen days each King and Queen had a new set of Coronation jewels. Most of these were destroyed in the Commonwealth days, and in more modern times economy calls have resulted in crown being altered to suit successive monarchs.

Search For Gold In England

King Of Drovers Arrives In London From Vienna
Armed with a small silver dividing rod, and clad in a picturesque uniform, Dr. Hermann Herwig, King of Drovers, arrived in London from Vienna at search for gold and in England.

Interested parties, he says, have invited him to take part in the hunt for gold in the south. During his stay he will undertake lectures on his engagements including an address to the British Society of Drovers. Drawing his rod from its scabbard pocket of his coat, Dr. Herwig gave a demonstration. Held over a cup of water the rod pointed its spring tip downward.

This rod is not his only apparatus. He has with him 27 different types of dowsing machines for detecting the presence of different mineral deposits.

Dr. Herwig, 76, has 49 years' experience of dowsing. He claims the discovery of important deposits of copper, gold, beryllium and platinum in Austria and himself owns gold, silver and lead mines revealed by his own rod.

Dr. Herwig came over to England by air and says that while the aeroplane was travelling between the coast and Crofton he recorded oil and gold deposits.

SELECTED RECIPES

SAND TARTS

- 1/2 cup butter
 - 1 cup sugar
 - 1 egg
 - 1 1/2 cups flour
 - 2 teaspoons Magic Baking Powder
 - White of one egg
 - 1 tablespoon sugar
 - 1/2 teaspoon cinnamon
 - Blended almonds
- Cream butter, add sugar gradually and well beaten egg, then flour which has been sifted with baking powder, "chill" dough. Put half the mixture onoured bread and roll on-eighth thick-cut with doughnut cutter, large, leaving white of egg and sprinkle with sugar and cinnamon which have been mixed together. Roll all around and arrange on top, three halves at equal distance. Place on buttered sheet, bake 8 to 10 minutes in a slow oven. When baked the tarts should be a very delicate brown.

Distilled Travel By Air

Racing Greyhound Keaped 2,000 Feet To Its Death
After biting its way through the fabric of an airplane during a trip from Melbourne to Sydney a racing greyhound leaped 2,000 feet to its death. The dog had been placed in a wicker crate in the baggage compartment at the rear of the passengers' cabin, and apparently became excited at air travel. It escaped from the crate and then started the task of tearing its way through the fabric. It eventually succeeded for when the air liner arrived at the Sydney airport, the greyhound was missing and the fabric was torn.

Maria Antonietta was imprisoned for more than a year before her execution.

Japan Buys Canadian Ship

Merchant Marine Freighter Has Been Sold Five Times
Apparently under permanent ownership at last, the former Canadian government merchant marine freighter, Canadian Leader, sailed from Halifax with a Japanese crew for the West Indies to pick up a cargo of scrap iron consigned to Japan.

Since her sale along with nine other government steamships last winter to the Montreal-Australasian New Zealand line, the Canadian Leader has had a checkered career. She was sold by the Annapolis line to the British Tower Steamship Company, resold to Rethymos and Kulu-kunda, Greek shipping company, and finally bought by Japanese investors at a price reported to be \$52,500. It was also reported Japanese interests and bought the Canadian Victory in England, and the Canadian British at Montreal.

Revising Their Manners

Japan Studying Proper Greeting For Next Olympic Games
Foreigners who attend the Olympic games at Tokyo in 1940 will be spared the embarrassment of meeting naive Japanese salutation, "How old are you?"

Puffos are planning the war around that the heretofore proper greeting from the Japanese viewpoint—is disastrous to foreigners, especially women.

Although the Olympics is three and a half years ahead, Japanese are already getting ready. Study of English has been given a great impetus among store clerks, politicians and businessmen. Ready eagerness for the morale of Japanese girls is being dissipated.

It is said that it is possible to make a razor blade that would keep its edge indefinitely without stropping, but such a blade would cost approximately \$25.

Learned At Seventy-Two

Two years ago Mrs. Hannah Wheelwright of Norton-Cox, Enfield highway, England, decided she'd better learn to swim. After all, she was only 72. So she went to the Enfield Lido, bought a swim ticket, and took her first dip. Now she can swim a quarter of a mile.

To Help You AVOID MANY COLDS

At the first nasal irritation or snifle, apply Vicks Vapo-Nol—just a few drops up each nostril. Used in time, it helps prevent many colds entirely.

VICKS VAPOR-NOL

For Coronation Day

House Of Commons Being Reconditioned
The state coach of the speaker of the House of Commons is being refurbished up for the coronation.

Its last appearance was at King George's jubilee, when the speaker rode in it to St. Paul's. At King George's coronation in 1911, it merely conveyed the speaker from the House of Commons to the abbey, a distance of less than 200 yards.

Oddly enough while the coach, with harness and stallions, is provided by the state, the speaker has to arrange himself for horses. For nearly a century Whitebait's brewery has had this privilege, which dates from the time when Mr. Speaker Shaw-Lefevre married a Whitebait. The coach weighs nearly 3 1/2 tons, and having no brakes cannot go down hill.

Breathes With Iron Lung

Birdsall Sweet, now 18, has completed the fifth year he has spent with an "iron lung" to aid his breathing. Hospital attendants in Beacon, N.Y., described his spirit as good and his growth in height and weight nearly normal. His treatment began after an attack of infantile paralysis.

"I hear you're going to be married, old man! I hope you'll be very happy."

"Well, I don't see why I should not. I came through the War all right."

"You're fine find us out, but they can generally be relied upon to call again."

The distance around the world at the equator has shrunk 1 1/2 miles in the last century.

Show Their Patriotism

Thousands Of Families Change Swedish Surnames To Finnish
Thirty thousand families have officially changed their Swedish surnames to more Finnish-sounding ones. This wave of patriotism follows the example of 25,000 families who did the same at the recent Kalevala (national epic) centenary celebrations. Considerable confusion has resulted from this sudden change, states a message from Helsingfors. Postmen, particularly, are finding it a problem to deliver letters to the right people, and correspondents have to think twice when they address business and personal friends.

A Brand New Industry

Calling Elk For Photographers Is Job Of Brand Guide
Brand has a brand new industry which was invented by Les Saunders, of Bowden, north of Calgary, who is a trail guide there in the summer. On long pony trail trips he amused guests at the Banff Springs Hotel by imitating the peculiar mating call of the elk. It was not long until he found bull elk answering him, and finally approaching near to investigate. Now he is kept busy calling elk from the woods for enthusiastic photographers.

Smith had called on his tailor with a complaint.

"Isn't this ball room steep?" he said.

"You should know best, sir," said the tailor, "for it was run up by you."

More persons over 60 years of age live in Switzerland than in any other country in the world.

NEW PLUG-IN NEW JACKET

YOUR NEXT 'B' BATTERY

ALWAYS A LEADER in battery improvements, Eveready this year presents the Layerbilt with a new "plug-in" socket. With each Layerbilt comes an adapter—a flat disc with connectors and plug the wires from the set to the one socket which is firmly embedded in the top of the battery.

This "plug-in" is an extra advantage for the famous Layerbilt which only built in layers—the modern invention which gives 40% more power than round-cell types.

Pay a few more cents for Layerbilt—and have many hours of trouble-free service. During the life-time of your set, Layerbilt will save you many dollars.

Freight Revenues Of Canadian Railways Reduced By Truck Competition

Gross freight revenues of the Canadian railways have been reduced by \$24,000,000 a year, as a result of trucks operating on the highways, and the damage to the net position of the railways is approximately \$24,000,000 per year. These figures were placed before the maritime board of trade at its annual meeting at Charlottetown in an address by S. W. Fairweather, director of bureau of economics, Canadian National Railways.

The railways, he said, were regulated in the public interest both as to rates, and service, and had to provide for equalization of rates to markets over wide areas, the development of new territories, the encouragement of back-country industries, freight rates lower than commercially justifiable and the maintenance of regular services, even in cases where there was no profit doing so.

The general principle in effect was that the railway must take the freight with the smooth, and if it cost millions of dollars to keep a railway open during the winter season, the justification for this was that the loss could be recouped from next summer's business. Frequently, also, railways were called upon to make special concessions in rates to meet temporary distressed conditions such as drought. These special rates were carried by the railways were not onerous so long as the railways were able to assess charges on the average to cover the cost.

Now the motor vehicles and the highway, acting in combination, had changed the situation. The higher rates provided by the state and at a cost to the motor truck much less than its real cost. The trucks operated relatively small capital investments and the industry was so young that rates of wages, hours of labor and working conditions were still at a chaotic state but at a low level. In addition, the trucker was able to avoid the carriage of high and low value commodities. These railways often carried at a charge of less than one-half cent per ton per mile.

The trucker could concentrate on the high-grade commodities where the charge for transportation by railway would be from 10 to 15 cents per ton per mile and, in addition, the trucker was under no obligation to maintain a service unremunerative or seasonal in nature.

Last winter the Canadian National spent \$70,000 in maintaining service on a certain branch line in the north. Over \$20,000 was spent in clearing snow and ice. The total revenue from that branch line exceeded the winter months did not exceed the cost of snow clearing alone to say nothing of the cost of the provision of train service. Yet this branch line was subjected to a heavy loss for over two-thirds of the year.

Mr. Fairweather said that the provincial government had the right to operate a business in a big way and he suggested that they might very well see to it that they were receiving in return from the industry what the expense had been to the state. In 1934 total maritime province highway costs amounted to over \$9,000,000 while the gross revenues from motor vehicle business, gasoline taxes, etc., amounted to only \$4,000,000.

Placed On Free List

Duty on Indian Cords Cancelled Until End of Year

Due to drought and other causes available supplies of Indian cords have become depleted. Consequently up to the end of the year this commodity will be imported into Canada from treaty country duty free. This was announced by Hon. J. L. Haley, revenue minister.

This means that Indian corn now may be imported with the duty of 10 cents per bushel intermediate tariff eliminated.

Under the French treaty Indian corn was subject to an import of 20 cents a bushel, and under the United States Trade pact 20 cents. The general tariff rate is 25 cents a bushel.

Word Has Been Rushed
You cannot sail to Italy which is Italy any more. It has been announced in Rome that the word has been banished from the Italian language because it owes its origin to a famous actor in a "mantician" country. Now it will be known as "mantician," which means "fled."

Brazil's 1930-31 coffee crop will fall over 21,000,000 bags.

Eskimos Are Enthusiastic

See Abundance Of Food And Clothing In Reindeer Herd

The economic security of Canada's Eskimo population may rest in the hands of a reindeer herd on the barren lands of the Mackenzie River district under the watchful eyes of government herders.

Harvey W. Nesbitt, for the past two years superintendent of the government reindeer station near Alkavik, is in Ottawa on furlough, firm in the conviction the big herd will revolutionize living conditions in the Arctic.

Within a year or two the herd will be big enough to split into sections, and Nesbitt believes the time will come when reindeer will be scattered throughout the barren lands, a new reservoir of food and clothing for Eskimo, trapper and missionary.

In the Arctic, a reindeer is a sort of walking clothing store and butcher shop for the natives. Each carcase dresses about 150 pounds, and the animal makes good use of its skin, even after two years of it, claims the meat is tastier than beef, and always was called caribou.

As a parting suggestion, Nesbitt said it might be a good idea for the Olympic sports to see his herdsman before selecting Canada's next ski team. Every day in the long winter months the Eskimos and Eskimo travel 20 to 30 miles on skis over the tundra, up and down the hills, and after your eastern skiers a thing or two about jumping and cross-country work.

League Against Rheumatism

Form Saskatchewan Branch Of Society For Study And Control Of This Disease

Organization of a Saskatchewan branch of the Canadian Society for the Study and Control of Rheumatoid Disease is under way. The organization was formed by resolution of the Saskatchewan Medical Association in connection with the formation of the Canadian Society for the Study and Control of Rheumatoid Disease.

Members of the committee are Dr. R. M. Ballman, Saskatoon; Dr. W. A. Haley, Regina; Dr. R. W. Kirkby, Prince Albert; and Dr. F. D. McLeod, Medicine Hat.

Formation of the new provincial organization followed establishment of a Canadian body last February to affiliate with the "International League Against Rheumatism, having headquarters in Amsterdam."

Glass Office Building

New Style Structure To Be Erected In New York

The world's first glass office building, five stories tall, will be erected on Fifth avenue and lobby into above the ground floor will be able to see outdoors.

Walled in behind glass tiles, the occupants will receive 70 per cent of the outdoor light. The place will be windowless, except for five show windows on the ground floor.

The place was announced by the Corning Glass Works, which will own and erect the structure. It will stand at the southeast corner of Fifth avenue and 66th street, in one of New York's swankiest shopping districts.

A Clever Love Bird

That he has the cleverest love bird in the world is the claim of Dr. H. Perkins, a barber of Sydney, Australia. It is three inches long and can pull a match from a box and present it to a customer, saying "O.K. Check" as it does so. The bird's office is in a shaving shop, and on cold days it places on the rim of a cup of tea, to keep warm in the steam.

Skydiver Makes Error

Skydiver Al Smith slipped while Montevideo watched in wonderment as he gave them their first sight of air skydiving. Criticism came from a spectator gazing upward from a downtown street. "Heh," said the spectator, "he's dotted an upper case 'V'."

King Edward's Pilot

Is Regarded As A Very Safe And Thorough Airman

Captain of the King's Flight! Pithy comments on Edward VIII. Flying, upon whose muscular shoulder rests the enormous responsibility of flying King Edward VIII. safely, have his dashing life came to him as casually as he refers to his ally—as casually as he refers to his ally.

"My boy," he calls the king. The 33-year-old pilot, who holds the distinction of being the first to pilot a British monarch, is the envy of his fellows, and a pleasing sight for feminine eyes. Flying is strong, alert, self-effacing and good-looking in the spruce, close-cropped manner reminiscent of the British army officer. He speaks in the clipped authoritative voice of the thoroughly disciplined soldier.

He is Edward's sole pilot, and his title gives him this summer in line with the king's emphasis on air travel.

Safe and thorough, Fiebert has been schooled in the worst air school. Known to his intimates as "Moose," he lives quietly at the Hendon, a private house in the suburbs of London. He is a constant lack and call of his royal master.

The king's pilot has a luxurious seating accommodation of five seats, radio, luggage department, refreshment cabinet, writing bureau, and cruises at 150 miles per hour with an 800-mile range. It is piloted in the Brigade of Guards colors—dark red and buff.

The Captain of the King's Flight now has carried out more than 2,000 hours of flying, and the king himself, to mention his flying, is a pilot of an aircraft. He has the engine of an accredited Royal Air Force pilot honestly earned during World War days.

Extremely modest he prefers to be called "mister." He says it's part of his job to keep in good health. In 1929 he was awarded the Air Force Cross for distinguished peace-time flying. He has never won a race, but in 1932 he was second in the King's Cup air race when he piloted the Prince of Wales' "Cunamper" to a victory.

Lord Trenchard, who spent his holidays at his country seat in Norfolk, will be 30 and 24 days old—the 21st birthday is on May 13. Lord Oxford will qualify by less than a month, as he reaches his majority in April 15.

One peer under 21 will attend a march on the others. Lord Herschell, who is 18, is a page of honor to the king and will walk close behind His Majesty during the ceremony, dressed in a scarlet tunic with ruffles and breeches of white satin.

It is thought that the "cruel blood" suggested by the bull's red rage portrays its flesh for human consumption, so meat from bull killed in Mexican bull fights is never sold.

Too Young To Qualify

Twenty-Two Peers Cannot Take Part In Coronation

No fewer than twenty-two peers will have cause to regret the day they were born when they realize that because they will be under 21 on May 13, 1937, they will be ineligible to take part in the Coronation ceremony.

Lord Trenchard, who spent his holidays at his country seat in Norfolk, will be 30 and 24 days old—the 21st birthday is on May 13. Lord Oxford will qualify by less than a month, as he reaches his majority in April 15.

One peer under 21 will attend a march on the others. Lord Herschell, who is 18, is a page of honor to the king and will walk close behind His Majesty during the ceremony, dressed in a scarlet tunic with ruffles and breeches of white satin.

It is thought that the "cruel blood" suggested by the bull's red rage portrays its flesh for human consumption, so meat from bull killed in Mexican bull fights is never sold.

Dish Towel Dogs Are "Up To Tricks"

Part Is A Page of Honor to the King and Will Walk Close Behind His Majesty during the ceremony, dressed in a scarlet tunic with ruffles and breeches of white satin.

It is thought that the "cruel blood" suggested by the bull's red rage portrays its flesh for human consumption, so meat from bull killed in Mexican bull fights is never sold.

PATTERN 565R

These frisky, dish-towel dogs are indeed "up to tricks" but wait till the children see them, for they'll wait to do the dishes. Just think what a practical gift or fair donation the set serves, would make. It's a dress, a stiff collar, and using one color of some give a silhouette effect. In a child's play, the pattern of seven motifs (one for each day of the week) averaging 4 1/2 inches; material requirements; illustrations of all stitches made; 20 cents in stamps or coin (cash preferred) to Household Arts Dept., Winning Newspaper Union, 215 Mulberry Ave., Winnipeg.

There is no Alice Brooks pattern book published.

Potash From Dead Sea

Great Britain Closely Watches Process At New Plant

The Dead Sea, the strangest body of water in the world, is slowly coming to life again.

Lying 1,300 feet below the level of the Mediterranean, receiving an influx of 4,000,000 tons of water daily from the River Jordan without an outlet, the sea has puzzled archaeologists and geologists for centuries.

Today, where once Sodom and Gomorrah stood, where David took refuge, where Herod and Mariamne fled when the Parthians captured Jerusalem in 42 B.C., modern science is taking out potash and bromine and the Dead Sea area is alive with activity.

Once barren and thought useless, the sea's shores are being reclaimed with the sound of hammers as a new potash works, with a 30,000-ton capacity annually, has brought on a building boom.

Reports put up by British capital, in and around the Dead Sea, have been bringing thousands of visitors to the sea each winter, and homes and water buildings are springing up along the coast.

Great Britain is closely watching the potash process, for the Dead Sea here only source of potash and bromine in the empire—and it will come in handy if war sweeps Europe and the world again.

The process, thought simple because of the natural function of the sea, is ticklish and is watched almost from the beginning to the end by 430 laborers.

The brine is pumped from the bottom of the sea through wooden pipes into large tanks which are arranged to allow a slow movement of the brine from one pan to the next. In the course of the flow, the brine becomes more and more concentrated until common salt precipitates. The next step produces carnallite, or crude potash, which is shipped to refineries.

By contrast to ordinary ocean water, which contains from 4 to 6 per cent of salt, the Dead Sea contains 25 per cent. No animal life is possible in its water, and very little plant life.

The evaporation from the sea, its only outlet from the heavy fumes, causes strange-looking blue-white clouds to float overhead, giving it a fantastic scene from a distance.

Realism In Films

Traveller In Hollywood Sees How It Is Produced

A traveller who was in Hollywood, reports that he was taken on a tour of the M-G-M studios, where he was shown dozens and dozens of sets, each one perfectly arranged and exact in detail; a submarine, several square blocks of eighteenth-century Paris (for "A Tale of Two Cities"), a whole battlement in an artificial pond, a night club, and (for "Romance and Juliet") a pretty convincing set of the Roman Colosseum.

The director took him over to a corner where there were two kitchen tables, one covered with a thin layer of dirt in which were stuck little pieces of straw, the other just covered with dirt. "We used them in 'The Good Earth,'" the guide said. "The rice fields of China before and after the ploughing."—The New Yorker.

Brazil has supplanted the United States as a supplier of raw cotton to Germany.

Many Uses Of Soy Beans Results In Increasing Interest In This Legume

Revealed In Action

Things Which Keep Thousands Alive Are More Chemically

Yale University has solved the mystery of enzymes, invisible things which keep man's tissues alive, by showing one of them at work for the first time. The enzyme revealed itself as a mere chemical, prone to action as soap in water. For many years scientists suspected that enzymes were alive.

The enzyme action was made visible by Dr. Kurt O. Stern, visiting lecturer in physiological chemistry, using the enzyme catalase. This is a red-colored protein, plentiful in the liver, but also distributed in small amounts through every cell in the body.

He used a spectroscopic to see the catalase in action in a transparent solution. A photo-electric cell recorded the speed of the chemical action of the enzyme exactly the same as an electro-cardiograph records the beating of the heart.

The catalase could be seen changing hydrogen peroxide into water and into gaseous oxygen. Although home steps in the transformation were too rapid to see, the photo-electric tube recorded them in fifths of a second.

Dr. Stern also watched other chemical changes as they were made step by step, by the enzyme. All these changes were observed in a test tube.

Changes Are Noted

Report Says That Family Life Has Come Back In Russia

Writing his observations of progress in Russia, in connection with the proposed new constitution, an Associated Press correspondent says the family life has come back into its own as a recognized basic unit of society.

Parents are held increasingly responsible for the maintenance and education of their children and "family influence" is stressed as one of the most important factors in bringing up the new Bolshevik.

Free and easy divorce is gone. Divorces are now taxed and both parties must appear before the divorce is granted. Divorced parents must support their children or go to prison.

Simplicity of dress is no longer considered essential to the good Bolshevik. Silk for the women, white collars and ties for the men have long since won public favor.

Ties have been restored in the office of housewife, and dress is in high esteem and there are dozens of other developments tending to the disappearance of food allergies, particularly those caused by protein, following the ingestion of specially refined eggs.

As a protein supplement, the oil used is of value in the rationing of eggs, milk, meat, soap, and poultry. A simple mineral mixture is advantageously added, since the beans may be served as a vegetable or in salads. Flour made from processed beans, high in fat content, is now found in the products of many bakeries. Beans that are absent, soy bean flour is marketed in diabetic foods.

The dried beans have been used as a coffee substitute, in soups, as a source of cereal, as a milk substitute and cheese has been made.

As to the composition of both the fat and the proteins of soy beans, these have been nearly equal to the composition of milk, but the protein is more in animal, soy beans could be used to replace meat in the diet.

The use of this interesting plant are finding increasing application.

Lost Wolf In Canada

One Killed Near A Home

A home killed near a home in Hopedale, Ontario, Canada, was shot to death by the fur-trapper, who had been recently shot at the house's entrance. The animal was so badly shot that he had to be taken to hospital. His condition was stated to be poor.

Large Power Station

London's largest power station, situated on the river at Fulham, officially opened on September 29. It has taken more than four years to build, cost £1,000,000 and will supply the whole of the south-east England with electric current.

The world production of this valuable legume is probably in excess of

one million tons annually. Manufacture of the product is followed by Japan and the United States. Statistics relative to the Russian crop are available.

Canadian production is, as yet, too small to exert much influence on the world market, but there is an increasing interest in the soy bean crop. Varieties suitable for domestic production are gradually replacing the imported beans.

Chemical analyses have been conducted for some years by the Division of Chemistry, Central Experimental Farm. The protein content, it has been found ranges from approximately 21 per cent, to 29 per cent. The total fat content ranges from 14 per cent, to 18.5 per cent, of the bean. Of two varieties, having characteristic saturated and unsaturated fatty acids, the unsaturated acids in the oil range from 82.1 per cent, to 84.3 per cent. The total fat content varies from 13.0 to 13.4. These data indicate the value of the oil for industrial applications, where readily oxidized oils are demanded. The vegetable oils containing valuable mineral matter, approximately 5 per cent, of the bean.

The use of soy beans is many and varied. Considerable amounts of soy oil are used in the manufacture of electrical equipment. Because of its drying property, it is used in the manufacture of varnishes and large amounts of soy bean oil.

Much of the oil finds its way to the soap works. Here it is especially suitable for automobile soap. Glycerine is produced as a by-product.

As a substitute for the oil, as a rubber substitute, cellulose, printer's ink, explosives, salad oil, lighting and lubricating oils, as core wires for machinery. The party hydrocarbon crude oil has been found useful as a stabilizer for shortening compounds.

Soy bean oil contains lecithin, a phosphoric fat, and is displacing egg yolk to some extent as a source of this material used in medicine. Of interest too, against medical lines, is the disappearance of food allergies, particularly those caused by protein, following the ingestion of specially refined eggs.

As a protein supplement, the oil used is of value in the rationing of eggs, milk, meat, soap, and poultry. A simple mineral mixture is advantageously added, since the beans may be served as a vegetable or in salads. Flour made from processed beans, high in fat content, is now found in the products of many bakeries. Beans that are absent, soy bean flour is marketed in diabetic foods.

The dried beans have been used as a coffee substitute, in soups, as a source of cereal, as a milk substitute and cheese has been made.

As to the composition of both the fat and the proteins of soy beans, these have been nearly equal to the composition of milk, but the protein is more in animal, soy beans could be used to replace meat in the diet.

The use of this interesting plant are finding increasing application.

AN EXAMPLE

Addressing a meeting at Coronation last week-end Premier Lethbridge warned his hearers that unless they co-operated with his government he may have to throw up his hands and say: "I can do nothing for you."

The Premier declared the issuance of prosperity certificates I had been only a partial success, and that some alleged Social Creditors had not taken them. Lack in change from storekeepers.

In view of the fact that Social Credit members of the legislature and members of the cabinet are not taking their indemnities and salaries in property but in it is not surprising that if a rank and file are following their example.

Fourth St. Next Town Hall

Here and There

Outstanding success has attended the publication of J. Marre's book, "The History of the Canadian Pacific," which is told the history of the railway in this country. The first edition of this comprehensive and fully illustrated work on Canada's history was sold early and another is now out in preparation for sale as Christmas gifts, for which it is anticipated there will be a heavy demand.

Effective January 1, 1937, contributory pensions for Canadian Pacific employees will replace the 35-year-old non-contributory system. Since the latter system's inception in 1902, the railway has paid out \$12,500,000 in pensions. The new plan, officers and employees will contribute three per cent of their wages or salaries. Pension rates will be unchanged and pensioners are will be the same as heretofore.

Twenty-three arrivals from British and continental ports and exclusive destination by Canadian Pacific times will constitute the mainstay of the route. The company has announced from company headquarters. Season will commence November 23 and close in mid-April.

Alan M. Irwin, of Montreal, has been awarded one of the Penrose-Lewis prizes for his book, "and ship-and sailing-war," which is published in Canada and Great Britain by J. Miller's. The book, which is published in Canada and Great Britain by J. Miller's, deals with the lighter side of sailing, and is a valuable, if informal, aid to would-be travellers.

Two Canadian Pacific scholarships at L'Escole Polytechnique and L'Escole des Hautes Etudes Commerciales respectively have been awarded to Gilbert Frenk, 23, son of Arthur Frenk, vice-president, Montreal, and Roger Bussiere, 23, son of Philip Bussiere, trader and banker, Piquet Village, freight office, Montreal. Both is tenable for five years.

J. C. Patterson, who succeeds Sir George general manager, Canadian Pacific Railway, London, England, with the title of European manager, was born at London, Ont., and educated at the Wood School, Toronto; Bishop College, the Cathedral, and the Royal Military College, Kingston, and served overseas with the Canadian Field Artillery from June, 1915, to September, 1918. During 1928 Mr. Patterson was general agent in Toronto for the steamship department and has also held the positions of assistant general agent, New York; general agent, passenger department, Philadelphia; and general agent, steamship department, Chicago.

The annual competition sponsored by the Canadian Travel Bureau, Canadian Pacific and Canadian National Railways for the most beautiful and for the largest number leaves is now open to the public. The leaves must be published in Canada and sent from a Canadian post. Prizes totaling \$215 will be distributed as follows:—32nd, beautiful leaf, \$100, \$45, \$25, \$10 and 10. Largest leaf, \$10 and \$10. Contest closes November 1, and entries should be forwarded to Canada's Travel Leaf Contest, P.O. Box 2000, Montreal.

Policyholders Own the "Assets" of Life Insurance Companies

As a great co-operative enterprise, Life Insurance has built up Assets in Canada totalling, approximately, two billion dollars. Yet these Assets are relatively small when it is realized that they are jointly owned by about 3,500,000 policyholders—one-third of Canada's population.

On the average, each policyholder owns \$571 as his share of the total Assets in Life Companies operating in Canada. Obviously, the great majority of policyholders are men and women of ordinary means—thrifty people who, year by year, have entrusted to Life Insurance part of their savings so that they may have financial security against the uncertain future.

These policyholders represent the best type of Canadian citizens. They have sought to preserve their financial independence, and,

as thrifty citizens, neither they nor their dependants are ever likely to become charges upon government or municipal relief.

To protect the interests of these 3,500,000 Canadian policyholders, Life Insurance Companies have invested their Assets in government and municipal bonds—in first mortgages—in public utilities and industrial enterprises—and in other authorized securities.

The soundness of the Investment policy of the Companies has been tried and proven during periods of severe financial stress. Governing and corporate bodies in which policyholders' moneys are invested have, until recently, maintained the integrity of their obligations. This has made it possible in turn for the companies, in their capacity as trustees for the policyholders, to fulfill every obligation guaranteed by their policies.

Now, however, there is a growing tendency to repudiate, by legislation, public and private debts, regardless of the debtor's ability to pay. Legislation which tends to destroy the ownership of public and private property places an unjust burden upon life insurance policyholders.

Life Insurance

Guardian of Canadian Homes

C. W. Moore, Sales Manager, Royal City Chamber Ltd., returned recently from Winnipeg, where he was in the West. The trip was made in one of the new sound-proof, ten-passenger planes. "A most comfortable trip," said Mr. Moore. "The planes are air-conditioned, with individual reading lamps, adjustable seats, air cushions, and air pillows, magazines, cigarettes and refreshments free of charge, including hot tea or coffee, or cold soft drinks. It goes almost without saying that the scenery viewed from such an altitude is unsurpassed."

"Conditions in the Prairies are probably a little improved over last year, some districts being better and some much worse. Crops suffered severely in many sections from drought, but in some districts, such as around Regina, Moose Jaw, and Yorkton, where crops were poor last year, they are very good this year."

"Mr. Moore states that the Royal City line are becoming increasingly popular on the Prairies. This gives employment to many of our people, as all Royal City lines are packed in the West."

Scouts Do Good Turn

Members In India Give Good Turn

What is described as the world's greatest boy scout public service good turn is contained in a report on the solar eclipse "data" at Kurukshetra, India, from this year, attended by over 300,000 pilgrims.

Normally Kurukshetra is a village, and its increase to the proportions of a large city by the arrival of Hindu pilgrims presents many serious sanitary and other problems. One of these is the control of the crowds during the progress of the eclipse, when the pilgrims are rushing for the bathing place.

In earlier years there were many drownings in the "tanks," or lakes, and deaths from crushing, and from snake bites and cholera. Since 1918, when the boy scouts began to assist the authorities, the casualties have rapidly diminished, until this year not one fatal accident, or death from cholera was reported.

The scout organization included an information bureau, life-saving brigades at the tanks, cholera mobile and mobile health brigade, water supply, fire brigades and traffic brigades. Preliminary work included clearing masses from the ground and the people camped.

The 200 trained scout life-savers constructed 25 rafts, each of which was manned by two rover scouts, water ropes and tackle. A small number of drowning pilgrims were rescued.

The tremendous rush to the bathing tanks at the time of the actual eclipse, previously the cause of numerous deaths, was controlled by the maintenance of one-way traffic between the tanks.

The mobile cholera and health brigades were credited with exceptional services. Each scout was supplied with pint bottles of strong disinfectant and keosene for burning incense, and a disinfecting station dealt with the clothes of scouts who came in contact with suspected cholera cases. Previously each boy had been inoculated against cholera.

The information bureau in addition to supplying pilgrims with all manner of information and advice, took care of lost women and children, and lost property.

A significant feature of this public service feat of Indian scouts is that it is shared by boys of all creeds—Hindu, Muslim, and Christian—disregarding the caste lines of their elders and "working-together" in complete amity under the banner of scouting.

Good Guide To Character

Girls Advised To Give Progressive Husband A Traffic Test

The American Automobile Association asserts that the best guide to a man's character is the way he drives a car.

"If a prospective bride," said Burton Marsh, director of the safety and traffic engineering department, "really wants to know her future husband's mind, let her ride with him through a traffic jam—she'll learn things."

While on a self-cited drive through bustling hours, screaming brakes and traffic policemen, he said, will bring out: A violent temper, nerves, impatience, politeness, timidity, patience and sportsmanship.

"It is quite true," Marsh explained, "that a man may be polite and quiet in his office and home, yet a little tilt with traffic will reveal that he's a bully at heart."

Without going into the psychological reasons behind it, Marsh said driving seems to stimulate the "show-off" and the "dare-devil" more than other types.

Mickey Mouse

Popular With Movie Fans, He Celebrates His 10th Birthday

Walt Disney's little mouse character was celebrated recently.

At the age of eight, Mickey Mouse is far and away the most popular of all movie stars. He has been decorated with 21 medals. His regular fan-letters from 30 different countries, he studio says.

His natal day came when a real live mouse was found in Kansas City.

"I got several mice in a cage on my desk," Disney recalls. "One was quite tame. He seemed to have a personality all his own. He used to crawl all over while I was working."

"I named him Mortimer first, then shortened it to Mickey."

Contraband Of War

The term "Contraband of War" was first used in the treaty between England and Spain in 1625. Actually it is applied to arms and ammunition and materials from which they can be made, carried by neutral vessels to either party engaged in war.

Prevalence Of Heart Disease

Death Rate For Many Years Has Been On The Increase

"Heart disease should have a greater share of interest as a public health problem," writes Dr. Rose of the Toronto heart specialist, in the current issue of "Health," official organ of the Canadian League of Canada.

"The death rate from heart disease has for many years been one of the leading causes of death in the industrialized world. It has been increasing steadily, and it is the result of proper and efficient education of the public in rules of prevention and treatment."

The treatment of heart disease, writes Dr. Jamieson, must be directed to the "control or cure of the underlying disease process, such as rheumatic fever, syphilis, hypertension, and the prevention or relief of associated abnormalities in function which might arise as the result of disease."

The time to work toward the first of these objectives is in the early stages of the causative process, before the heart is permanently damaged. Dr. Jamieson urges in his article.

Rest is "a tremendous power factor" in the treatment of heart disease, he contends. "It does not mean inactivity, but rather a rational way of living in proportion to the individual's capabilities. One may actually require rest in bed, while another may need only moderate restriction of their activities."

It is not a good idea, he says, to permit indulgence in exercise that does not produce a feeling of fatigue, palpitation of the heart or undue fatigue.

It is of considerable importance in relation to heart disease, Dr. Jamieson states. "Its importance is not in its restriction, but in its restriction in quantity. It is desirable for the patient with heart disease not to over-exert at any one meal. It may be better to eat five small meals than three large ones. The patient who is definitely overweight will be benefited by a prescribed reducing diet."

"All cardiac drug treatment must be supervised by a physician," Dr. Jamieson concludes. "Self-medication is unreliable and often dangerous."

Will Require New Carriers

If Trains And Steamers Carry Autos

The "The Passenger" is possible the only carrying business by trains and steamers will in due time, bring about the development of a new type of carrier in use.

Neither the steamers that carry up to four automobiles nor the trains that carry up to six, are designed in the first instance to carry automobiles in the same manner as baggage. It was a common sight a few years ago to see the automotive engineer designed the lower type cars, to save space for men struggling to get one.

Colin H. Shollan, said, if anyone wants to reason along these lines the logical point to make is that the owl is too dumb to see in broad daylight.

Gold Leaf Is Fragile

Gold leaf is about 1,200 times thinner than the average sheet of paper. The slightest handling of it by a layman will cause it to disintegrate and disappear into the pores of the fingers. But placed on the outside of a building, such as a State Capitol's dome it will wear for years.

May Reach Century Mark

Dr. A. Eugene Austin, personal physician to John D. Rockefeller, Jr., believes the American "auto" will realize his ambition to live to be 100 years old. "At 97," Dr. Austin said, "Mr. Rockefeller is alert, active and keenly interested in worldly affairs. He is 30 years younger than his age."

Germany is sharply increasing its imports of American cotton.

Officer Wife Barred

Lady Britton, wife of the ship's commander, will never sail in the "Queen Mary" while her husband remains in charge. She wouldn't be allowed to return if she offered to pay her fare for the coming campaign have a rule that no official may take his wife with him. Their daughter, Mary Britton, might one day sail with her father. There's nothing to prevent that.

World sugar consumption reached the new high of 21,184,000 tons in 1935.

There's a crisis. We've more inspectors than taxpayers.

Japan is almost entirely dependent on outside sources for its coal.

Spain has brought grapefruit to Florida in the 16th century.

The Bahamas Islands got \$20,000 for oranges it shipped out last year.

PLANS TO CROSS ATLANTIC IN BARREL

Ernest Hignault

The little mountain resort of Chamone, in the Swiss Alps, has celebrated an event of importance to climbers all over the world—the 10th anniversary of the first ascent of Mont Blanc, Europe's best known and second highest peak.

Military ceremonies, the traditional parade of Alpine guides and a display of the latest technique of climbing in the high altitudes marked the occasion.

And at the same time the French government honored the body of men, for, for years, since Alpine climbing became a popular and expensive sport, have brought hundreds of thousands of tourists dollars to France. M. Benoit Couper, president of the Association of Guides, was awarded the ribbon of the Legion of Honor.

It was in 1788 that the fortunes of Chamone were founded by the first ascent of the mountain by Jacques Balmat, a chamois hunter, and a local doctor, Gabriel Paccard.

Jim—Politics means nothing to me. I'm going to vote for that fellow here.

Jim—I understand you were going to vote for him because he gave you a job.

Jim—Wouldn't you like a man who gave you a job?

Will Not Go To School

Princess Elizabeth To Be Educated By Private Tutors

Princess Elizabeth of York, who may become a second Queen Elizabeth, will not go to school.

The young princess, now in her 11th year, will be given special private instruction, it was decided at a family council at Balmoral Castle, Scotland, attended by the King and the Duke and Duchess of York.

Reasons for the decision were said to be the difficulty of schooling a child without causing deep emotional, the question of her schoolmaster, the unusual character of the studies she will have to undertake. The decision is said to be in accordance with the expressed wishes of the late King.

The course of future studies for the princess has been carefully planned by the Duke of York after consultation with leading educationists. The entire subject has been considered by the cabinet. It was understood the Duke's suggestions were fully approved by the cabinet members.

At present Miss Crawford, the governess of the princess, is in complete charge of the child's lessons. The princess is assisted by a special tutor in French and Italian, and a woman instructor in French and music. Later a tutor will take up the classics and history.

Safe Driving

Twenty-One Rules Recommended For Motorists

Twenty-one rules have been recommended to motorists for lowering the number of auto accidents. They were drawn up at a meeting in New York of students of motoring and are calculated to make highways safer.

They are: keeping car in proper condition; observance of traffic laws; alertness; speed to fit conditions; good early training; no drinking while driving; pass only when safe; look.

No dependence on other driver; ability to size up situation; exercise of common sense; strict attention to driving; enjoyment of driving; slow night driving; driving only when physically fit; willingness to yield right-of-way; personal responsibility; taking no chances; avoiding hurry.

Planning New Aerodromes

More Are Needed For Use By Royal Air Force

Since it was decided in May, 1935, to increase the strength of the Royal Air Force, 30 sites for new aerodromes have been chosen. Seven are ready for use, and the others are being prepared.

Of these new aerodromes 27 are in the eastern counties, nine in the Midlands, and at no great distances from London, eight in the west, three in the north and two in the south. Some were formerly civil aerodromes, but special buildings, and in some cases enlargements, have been necessary.

Thirteen training centres for the new R.A.F. volunteer reserve are to be formed by the end of this year, and contracts for the work are being placed. Most of these will be at existing aerodromes.

Eastern Canada Airlines

Fleet Of British Aircraft Is Built For Canada

The first complete fleet of British aircraft built for Canada was named at Hamilton by Lady Balmorland, wife of the director-general of civil aviation in Britain.

The five machines comprising the first units of the fleet also are the first British aeroplanes specially designed as freighters. They were built by General Aviation for eastern Canada, and are named after the five chief cities between which they will operate: Montreal, St. John's, Halifax, St. John's, N.B., Sydney, N.S., and Charlottetown.

An excellent Cape Cod oyster grower asserts that 30 per cent of the persons who order oyster stew don't bother to eat the oysters in it.

The oyster union is its tail as a hand in clothing to boughs.

for Remarkable Smoking

Buckingham Fine Cut

COOL MILD TOBACCO

WORLD HAPPENINGS BRIEFLY TOLD

Germans involved in automobile accidents heretofore will be admitted to a special blood test proving sobriety or intoxication, the ministry of the interior announced.

Extensions of lines and equipment costing \$470,000 will be made this fall in connection with the United Kingdom's government telephone services.

During July 40 persons were killed in highway accidents in Ontario, Ontario highway department reported. The figure was the highest in any July since 1929.

Provincial relief inspectors checking a plan from Riverside, Essex county, for more provincial help. Found 22 relief recipients driving their own cars," Hon. David Croft, minister of public welfare, said.

Western Canada's worst crop this year is one of the highest in quality. It was indicated in a report of James D. Fraser, chief grain inspector, to the annual meeting of the grain standard board.

A decline of \$80,000,000 in total cash income of United States farmers from July to August when farm income usually increases—was reported by the agriculture department.

Declaring baby shows came late, early and unannounced the Mothers and Infants Association at Crofton, England, declined to act as a reception committee at a national baby show in Rome.

Striking suddenly in United States cities from coast to coast, treasury law enforcement agencies had asked several hundred illicit stills in a drive against narcotic and liquor law violators.

Land Salvaged in India

Forty Million Acres Reclaimed By British In India leads the world in territory that has been reclaimed or irrigated during the last fifty years, according to the latest report of the Central Irrigation Board of India, just published at India Office, London.

The total of land reclaimed and irrigated and swamp and marshes reclaimed now borders on 40,000,000 acres, 31,000,000 of which are in British India.

The second country for the amount of land reclaimed in ten years is Italy, with just under 6,000,000 acres. In India the land reclaimed alone amounts to 7,000,000 acres; the balance held down in cultivation has been irrigated.

When the present project in India shall be completed 50,000,000 acres of land will have been irrigated, to-day what has been done furnishes work for just that number of people, who own or work crops which give forth \$275,000,000 worth of produce—principally rice and wheat, while the quantity of water used daily is about 260,000,000 gallons, extracted from over 75,000 miles of canals and distributed by over 50 great dams and hundreds of smaller ones.

Clear Of Debt

British Columbia Town Celebrates By Burning Paid Off Bonds

A little pile of ashes was all that remained of Laidlaw's \$94,326 bonded debt. When coal mines there closed six years ago the town appeared doomed. Laidlaw's plan, spring a rebirth took place with the establishment of a logging company in this British Columbia town. A giant diggery was erected on the site where the city's debt was burned, as it is to signify the passing of the coal digging era.

A new prosperity brought by the logging company has enabled the city to pay off its debt in the last cent. The city celebrated the occasion by burning the bonds in a giant bonfire.

Chased Season For Squidgers

All shooting or trapping of red squids will be prohibited in Alberta this fall and winter, according to an order issued by the game branch. General severity of the last autumn resulted in their being just on the protected list. In previous years there had been seasons from Nov. 3 to March 31.

Completes Long Trip

Marchioness Of Reading Visited United States And Canada

The Marchioness of Reading has returned to England after completing a 10,000-mile transatlantic motor tour.

Traveling with only one companion and a chauffeur in order to study the people of Canada and the United States at first hand, Lady Reading said she was impressed by their vitality and friendliness, especially the youth.

"One of the things that particularly struck me in every city and small town I have visited," she said, "has been the latent and super wealth that lies in the youth of the country. Their vitality, enterprise and determination to succeed is a source of a job and their large view of the future are very stimulating and thrilling to watch."

Lady Reading, whose husband died last December, arrived at New York in May. After visiting friends, attending to her business and being a guest of President and Mrs. Roosevelt at the White House, she returned her trip through Canada, returning east through the United States.

She said she disregarded letters of introduction that she had been given in order not to disclose her identity. As head of the Personal Service, largest voluntary relief organization in England, Lady Reading was particularly interested in observing relief methods. She talked with relief station men, hospital staffs, W.P.A. workers, farmers, tradespeople and business men.

"As an interested watcher," she said, "I cannot help feeling that one of the great gifts education and democracy have to the world has been the complete freedom from self-consciousness which is so apparent in the youth of the country."

"It is a very striking thing to see the splendid way in which people have spent their money to enrich their cities and states. Universities, hospitals, libraries and monuments have been provided on a scale more lavish than anywhere else in the world."

Made Himself Popular

Berlin's Chief Of Police Stopped Testing Of Horses

For once the chief of police in Berlin is popular. His plan of marking noisy automobile drivers has brought much praise. He ruled that anyone testing his auto horn too loud or too frequently must have his car painted with a large yellow spot. After a few had received the decoration others became quiet, and peace reigned in the city which not long ago was called one of the noisiest in Europe.

Communist Goodwills, of Toronto, urges car drivers to take up sailing to learn courtesy, but that's just the trouble. Too many motorists already know how to sail along the highways—too fast.

Crochet An Afghan Square By Square

Household Arts by Alice Brooks

Rising Sun
Mind Your
Up Wool
Scraps

PATTERN 5668

A soft, warm afghan's practically a necessity when one has down for a cat-nap, and here's one that even brightens your slumbers. Called "Rising Sun" because of the color scheme, this stunning effect is obtained. Crochet the blocks in the main, or different, colors and use up scraps of work. Make a pillow too. In pattern 5668 you will find illustrated 8 of the and of the stitches suggested.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to The Book of the Week, 115 St. Michael's Ave., Winnipeg.

There is no Alice Brooks pattern book published.

The Newest Photography

Tristram Principle Shows Depth And Cost Is Low

A picture of an old man in his coat shown glittered in natural color on the desk of Douglas P. Winnick, 29-year-old Madison, Wis., photographic engineer. The picture seemed to be a frame through which one was looking at a live human being.

Suddenly Winnick picked it up, and the man in the picture seemed to move. An observer could see around the man and look at the scenery in the background. The likeness was round and full and the 8-by-10 photograph had actual depth. Winnick laughed and explained:

"This is the first 'tristram' photograph having three dimensions over made."

Winnick demonstrated a series of "tristram" photographs, saying he expects the principle to revolutionize motion pictures, photography, homeography, television and graphic printing.

The technique employed—use of cellulose acetate plates embossed with ridges to the inch—will enable each of these fields to adopt ideas showing depth just as realistically as an actual live scene. Winnick said, and the cost is exceptionally low.

Winnick described his process as follows:

The eyes see two pictures in any scene, but the brain combines these, giving the sense of depth. In photography only one picture can be visible, and the second, resulting in a flat, lifeless impression.

The new process is simply a method of presenting two pictures to the eye. "This is accomplished through grooving the negative of the film. These grooves are so minute as to be invisible, and are the secret of the entire process. Each groove works as a lens which breaks the single image into two parts."

The completed negative contains two mass of tiny two-section pictures. The negative is developed on cellulose acetate plates, also grooved. When seen from any angle the apparently single stereoscopic print, resolves itself into a separate picture for each eye, and presents a clear, soft, rounded view.

Winnick displayed a picture of fruit in a picture window. The scene was in full natural color. Each piece of fruit was outlined in depth and a view from a different angle revealed another piece behind it. The picture was ordinary size, 5 by 10 inches.

Protege Of The Queen

Young Orphan Boy Will Receive A Secondary Education

Queen Mary presented for adoption to the Royal Infant Orphanage, Wandsworth, a two-and-a-half-year-old orphan boy who will be maintained there and receive a secondary education until he is 16. He is Brian Frank Roberts, whose father, a chief steward on the Orient line, died, the Orient line's chief steward, his mother died at the age of 31.

An official of the orphanage explained Queen Mary had the right of nomination to the institution of two children, so that there is always a protegee of hers at the orphanage.

"You say Jake takes everything literally!"

"Yes, he was invited to a house-warming party and he took along some kindling and a box of matches."

WAKE UP YOUR LIVER BILE—

And You'll Jump Out of Bed in the Morning Ready to Go

The time has come when you must wake up your liver and bile. It is the only way to get rid of the toxins that build up in your system. It is the only way to get rid of the toxins that build up in your system. It is the only way to get rid of the toxins that build up in your system.

New Gold Strike

Encouraging Reports Received From Yellowknife Mining Division

Confirmation of a new gold strike in the Yellowknife mining division of the Northwest Territories is contained in a message received by Hon. T. A. Crevier, minister of the interior, from A. L. Cumming, chief mining inspector for the department at Fort Smith, N.W.T.

The message stated that a new gold strike is located on the east side of Copper Lake, about 10 miles southeast of the mouth of the Yellowknife river, where it enters Great Lake.

The original locators of the find were representatives of the Mining Corporation of Canada, who discovered the strike last July 15, striking 30 dykes. Two weeks later, the A.X. Syndicate staked 100 claims in the area. On September 5 staking was carried out by representatives of Ventures, Limited, Fred Cumming, the A.X. Syndicate, Karl Springer, Woodhouse Syndicate, Burwash Yellowknife Mines, Limited. The Mining Corporation and the A.X. Syndicate are planning to carry on development work during "freeze-up."

Interest in the new strike is indicated by the fact that the Yellowknife mining division. Approximately 600 claims have been staked to now. Mining Inspector Cumming and Dr. A. W. Jolliffe, geologist of the interior department of mines, visited the area.

Cumming's report stated the strike consists of a series of veins, lenses and shearing zones occurring in a belt 15 miles in length with showings of iron gold. "Width of the veins and lenses would indicate a commercial tonnage if the samples stand up under assay."

Sanctity Of Contracts

Maritime Board Of Trade Sees Danger Of Departure From Right Honesty

"A definite and apparently increasing tendency in certain quarters to depart from that rigid honesty involving sanctity of all contracts and obligations, provincial, municipal and otherwise," was noted by the maritime board of trade.

In a resolution passed at the closing session of the annual convention which expressed "grave concern" in view of the trend, the association sought to "earnestly impress upon the federal government its profound seriousness."

Sanctity of all contracts and obligations to the past had been accepted everywhere as traditionally and characteristically Canadian, the resolution declared.

The federal government was urged to use its "full prerogative to maintain the credit and standing of all Canada because of the 'irrevocable' consequences upon the credit and reputation of the country" of the departure from individual and characteristic honesty observed, the resolution concluded.

Better Income

A new record for creamery butter production was established in Saskatchewan during 1933 when the total reached the total of 23,839,839 pounds. This is almost two million pounds in excess of the previous high mark set in 1931.

Eulogized Canadians

People Have Accomplished Miracles States London's Lord Mayor

Sir Percy Vincent, lord mayor of London, eulogized Canadians when he gave the count of common count an account of his visit to Canada.

"I shook hands with thousands of people, received the freedom of cities and a great number of civic welcomes," he said. "Above all, I found an unbounded enthusiasm for all things British, a love of England, a depth of feeling for this old city and its representatives which was most unbelievable."

"Never during our whole visit was there one word of adverse criticism. I heard on all hands that the visit had revived or re-established a new view of life in its civic life and had far-reaching results which will strengthen the ties of kinship."

"Canadians have in a few score years accomplished miracles. I returned filled with an impression of a vast canvas on which they have as yet, with all untiring energy and genius, craftsmanship, and the finest outlines of a great and beautiful picture."

Hungary Using Esperanto

Employees Of Post Offices Being Trained In Language

Postal officials are now training their employees in the International Esperanto. Through the Universal Postal Union of Bern, the Netherlands postal administration has sent out invitations to the third international congress for postal, telegraph and telephone officials, for a ten-day course. Banks are also using Esperanto. The Hungarian-Italian bank and the Hungarian general credit bank both with using Esperanto in addition to the language previously in use for correspondence. The banks have now sent out folders giving maps and information as to the location of their branches in Budapest and the rest of the kingdom.

American Animal Clinic

Doctors Will Treat Any Injuries In Memorial Hospital

A clinical service for pets—which treats bird turtles and mends scratches of canines and felines—is being pushed by the American Animal Clinic in Boston by the Memorial free clinic for animals.

Made possible by a \$60,000 trust fund donated by animal lovers and admirers of Henry C. Marvin, who preceded over the Boston workhouse association for more than 20 years, the clinic was founded in 1929 as a memorial to him.

Here pets of all sizes, descriptions and breeds are treated by Dr. Terrence Burke, chief veterinarian, and his assistant, Peter Simpson.

Carry High Speed Cameras

Aircraft Being Built For Service In Northwest Territories

The second of three aircraft being built in Montreal for the department of national defense for service in the Northwest Territories has been put through tests. The planes are especially built for high speed photographic and tracking work and carry sufficient fuel and oil for five and a half hours' work at high altitude.

At the end of the cabin are mountings for three oblique cameras which photograph automatically through small apertures in the metal body. The aircraft are fitted with float landing gear and the normal wheel undercarriage can also be fitted as well as a special anti-carriage for winter flying.

The Netherlands have a shortage of land and must find employment in industry for over 30,000 people this year.

Nearly every country in the world has, at one time or another, turned its post office system into an advertising agency.

Carrying War Orders

Army-Aids Nails Know Where To Report If Needed

Millions of Germans between the ages of 20 and 45 are carrying their war pockets at order telling them exactly when and where they must report in the event of war.

"This 'kriegsbearbeutung' (order to take part in war), as it is headed, is causing admitted anxiety, especially among the young men, who have experienced the horrors of the Great War."

Outwardly they display enthusiasm, but in private, confidential conversations their beliefs are often quite different.

With Prussian exactness the order specifies even the barracks in which the recipient is to report, what he is to bring with him in the way of clothing, what he is to do in case he meanwhile changes his residence, etc.

The order is a blue sheet of paper eight by five inches. Written concisely in German, it is the words: "This order serves in lieu of a ticket on the railways to the point where the addressee must report."

Regulations accompanying the order state that failure to live up to the terms of the kriegsbearbeutung will be punished by martial law. "The person thus summoned is subject to martial law from the first day of its becoming effective."

Practice Has Been Stopped

Philippine Jail Prisoners Not Allowed To Eat At Home

Prisoners in the provincial jails of the Philippine Islands may no longer return to their homes, unescorted, to have their meals and to sleep. Elpidio Quirón, secretary of the interior, has returned from a tour of the provinces and says that this "illegal and bad practice" must be discontinued forthwith.

The reason for allowing the prisoners to take their meals at home was that the government was thus avoided the cost of feeding them.

In the past, minor offenders in many prisons were permitted to go home two or three times a day for their meals. Many of them were released every night so that they could sleep at home. Few tried to escape.

A Good Advertisement

Smith noticed a bill on the floor of a big store. After glancing cautiously around to see that no one was looking he took out his handkerchief and dropped it on top of the coin. He then picked up the handkerchief, but the coin stuck firmly to the floor. He stood up hastily as he heard a shop assistant approached him.

Henceforth, in Montreal, anyone who blows an auto horn between midnight and four a.m. will be liable to a fine of \$40 and costs or one month in jail. This will be apt to take the enthusiasm out of the drivers.
